Historija

#1 - 04.07.2008 10:20 - Saša Vranić

evo šta kažu, koje su opcije:

<http://www.voip-info.org/wiki/index.php?page=Asterisk+Dialplan+Patterns>

- X matches any digit from 0-9
- Z matches any digit from 1-9
- N matches any digit from 2-9
- [1237-9] matches any digit or letter in the brackets (in this example, 1,2,3,7,8,9)
- . wildcard, matches one or more characters
- ! wildcard, matches zero or more characters immediately (only Asterisk 1.2 and later, see note)

#2 - 04.07.2008 11:25 - Saša Vranić

još info-a

Note: Do not use '._', because it will match everything even the predefined extensions!!!

Example:

_359ZXXXXXX - This will match all dialed extensions that start with 359, and are 10 digits long(including 359)

_0XXX. - This will match all dialed extensions that begin with 0 and are minimum 5 digits long (including 0)

#3 - 04.07.2008 11:27 - Saša Vranić

pošto nama treba da se traži "269291" samo, to bi trebalo ovako

_XXX269291

ali sada sam rekao da je prefix 3 broja, a šta ako sada dolazni poziv bude

406168

umjesto

032406168

???

#4 - 04.07.2008 11:27 - Saša Vranić

testirao ovdje u officesa, i ovo ovako radi...

zvao vkmiru da me zvrncne, ali i kada on zove opet postoji prefix
