evo ovaj rhino proizvođač kartica za asterisk je napravio mašinu na bazi atoma dualcore-a:

The Ceros Bailout is exactly the same as the full sized Ceros, but lowers the cost of ownership by replacing the large ATX motherboard and CPU with the new Intel Atom Dual Core CPU and motherboard combo set. This board is a mini-ITX form factor, and supports one PCI expansion slot. All other features are the same as the standard Ceros!

The Ceros Bailout comes with the following bundle options only. These configurations are for the 80GB hard drive base configuration, you can add additional items (see below) as well for even more savings.
